

Server Hosting - Dynamic Dedicated Servers

This is our most popular Virtual Private Server / Dynamic Dedicated Server.

The dds200-ZA/US is perfect for medium traffic e-commerce or dynamic / database-driven web sites as well as for the hosting reseller with a moderate number of low traffic, static brochure-type web sites.

The dds400-ZA/US Dynamic Dedicated Server offers a higher level of power and available resources than the dds200-L and is a great choice for small application providers or those hosting e-commerce sites with RAM and/or CPU intensive scripts running.

Hosting resellers will be able to host a moderate number of static and dynamic websites while still maintaining performance and realizing the advantages and cost savings of the VPS/DDS server model.

The dds600-ZA/US has almost all of the power of a traditional dedicated server and is an excellent choice for hosting resellers and/or application providers requiring more serious dedicated resources.

As part of the TsunamiNET DDS product family it fits into the migration and scalability plan bringing you just one step from the fully dedicated server while still allowing you to take advantage of the cost savings and additional benefits of our Virtual Private Server / Dynamic Dedicated Server
