

## DDS150 Bare bone Servers

While this is our least costly server option it is not ideal for people without linux / server knowledge. If you don't have intimate knowledge of the Linux core operating system, please refer to the DDS200 - 600 Range of servers that includes a control panel for easy management.

If you want FULL and TOTAL control then read on.

This is the Virtual Private Server / Dynamic Dedicated Server if you want a clean Linux based server. The dds150 is perfect for the person who requires his/her own dedicated Linux server where FULL AND TOTAL CONTROL is essential as well as for the hosting reseller who likes to do his own thing.

The DDS150 does not come with any control panel, and is a pure base install of your chosen OS. You can then build on it from there, install aps, software, in fact do basically almost anything you want.

The dds150 includes 1 IP, 512Mb Ram, 20 GB of disk space and a 2 Mbps unmetered bandwidth connection.

More Space, IP's, RAM are available on demand, with no downtime for upgrades.

Option A - Preloaded with CentOS 5

Option B - Preloaded with Fedora 8

Option C - Preloaded with Open Suse 10.3

Option D - Preloaded with Ununto 8.04The DDS150 give you ultimate control for only R395.00 p/m
